A SUITE OF APPLICATIONS, BUILT FOR THE CLOUD

The EarthCheck Software as a Service platform (SaaS) provides a secure and integrated cloud application solution to drive organisational performance by managing, automating and improving the efficiency of key activities, processes and information. EarthCheck SaaS also offers 'plug-in' or customised solutions for organisations across most industry sectors.

Clients have an ability to securely access vital information across a broad range of performance metrics anytime, anywhere and from any device. With a completely cloud-based delivery, the platform delivers corporate and social responsibility reports as well as operational, financial and compliance reports. The platform becomes a centralised portal that can be personalised to allow each client to develop an individual branded interface.

EarthCheck SaaS is a complete enterprise-wide sustainability performance management solution for the whole value chain, which can cover all sustainability applications, as needed, including carbon, energy, environment health and safety (EH&S), procurement, risk and design.

Features include:

- Easy capture of both qualitative and quantitative information.
- Uploading and storage of documents as attachments.
- Visually compelling graphs of quantitative data.
- Calculation of performance metrics (e.g. ESG, CSR..) and indicators using factors that change over time.
- Helpful online support functionality such as FAQ's, glossaries and embedded videos.
- Benchmarking of quantitative results against regional peers and climate zones.
- Automatic updating using statistical methods.
- Custom report generation.
- Console for business clusters to track and manage user progress and performance data.
- Client subscriptions management.
- Client invoicing and payment management.
- Ability to award achievements to users.

CASE STUDY:

Kosciuszko National Park Plan of Management

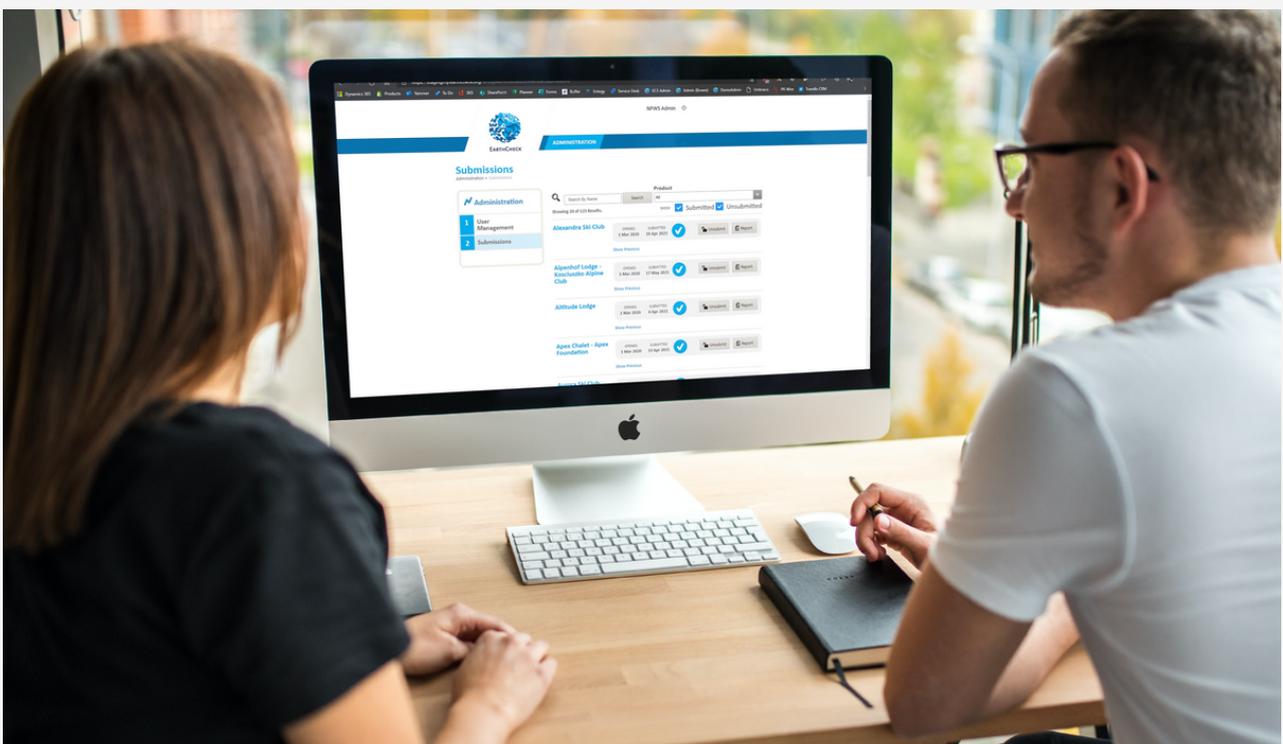

The Kosciuszko National Park is an area of outstanding natural beauty and unique environmental diversity. The interlinked ski and village areas of Perisher Valley, Smiggin Holes, Blue Cow, Guthega and Bullocks Flat contain 1,245 hectares of skiable terrain and accommodation for 4000 people making PRR the largest ski resort in the Southern Hemisphere.

The Kosciuszko National Park Plan of Management (2006) is a highly considered and ambitious Plan, providing a framework for tackling the management challenges of the largest national park in NSW. As part of the Plan, each year a public annual report is prepared which outlines the progress being made. This report covers a defined period and summarises the main management achievements, research and monitoring programs, the annual condition assessment of the park's values as well as a review of the Plan itself, five years after its adoption.

NSW National Parks & Wildlife Service (NPWS) have requested that EarthCheck support the Environment, Energy and Science (EES) Group which is part of the Department of Planning, Industry and Environment bring together greater alignment in reporting and measurement for the delivery of the Kosciuszko National Park Plan of Management (KNPPOM).

NPWS are using EarthCheck's SaaS and expertise in the measurement and reporting of both individual lodge data and also the overarching resorts within the park to ensure they can have a consistent ongoing science based methodology that speaks to the required KPA's of the KNPPOM inclusive of quantitative data on energy, water, waste and carbon footprints and establishment of environmental management systems for all lodges and resorts.

EARTHCHECK

#WalkTheTalk

EarthCheck is the world's leading scientific benchmarking, certification and advisory group for travel and tourism. Since 1987, we have helped businesses, communities and governments to deliver clean, safe, prosperous and healthy destinations for travellers to visit, live, work and play. We understand the value of big ideas and the importance of clear communication. We know that what can be good for the planet is also good for business.
